

SunSystems Vision 6

Key Features – Vision Executive

Overview

SunSystems Vision Executive is a dynamic analysis and reporting application that enables you to uncover and analyze the trends, problems and opportunities that are often concealed in corporate transactional data.

It provides direct access to SunSystems from within a familiar desktop environment, facilitating the inquiry and analysis of financial information. Supporting proactive and decisive management, it enables executives to access, and exhaustively query, the financial data required for a wide range of managerial and analytical processes.

With its flexibility and ease-of-use Vision Executive allows non-technical and non-accounting staff to effectively analyze SunSystems data, providing enhanced analytical power and assisting the decision-making process. Optionally data from other applications may be combined with SunSystems data within a single report.

Key Features

General

- Powerful standalone reporting package
- Incorporates worksheet, word document output and charting facilities
- Enables multi-dimensional and flexible analysis
- Supports ad hoc, customized or standard reports
- Output of results in multiple formats, including Microsoft Office, PDF and HTML
- Includes full report archiving facilities
- Client and browser versions provided
- Secure access

Executive Analysis & Reporting

- Comprehensive in-built analytical functions such as Drilldown, Expand, Breakout and Cube Analysis
- Hierarchies to allow non-contiguous codes and code ranges to be combined for very specific data analysis

- Charts can be embedded in worksheets and dynamically linked to data for visual interpretation of results
- Comprehensive output formatting capabilities for sophisticated report generation
- Intelligent prompts enable key report criteria to be selected before each report is run
- Ability to save frequently used analysis processes and paths

Browser Access

- Vision Executive (Browser) is a powerful zero footprint application that requires no additional software to be installed on the user's computer
- With Vision Executive (Browser), processing is confined to the server; only required data is returned to the client, saving space and processing time
- Provides all the analysis and reporting features of Vision Executive through a familiar browser interface, except report design
- Vision Executive workbooks can be deployed simply across the Internet whilst maintaining full functionality

Secure Access and Control

- Only authorized users can access sensitive data
- SunSystems security is fully respected
- Restricts access to certain tables
