

→ SunSystems Vision 6

Key Features – Vision Word

Overview

SunSystems Vision Word is an intelligent, intuitive add-in for Microsoft Word that provides a fast, easy and more adaptable method to exchange data with your SunSystems database. Vision Word enhances the already extensive functionality of Word, enabling powerful presentation and reporting.

Vision Word provides a dynamic link that allows current information to be incorporated in Microsoft Word from multiple SunSystems tables into a single document.

With its flexibility and ease-of-use Vision Word allows non-technical and non-accounting staff to effectively analyze SunSystems data, providing enhanced analytical power and assisting the decision-making process. Data from other applications may be combined with SunSystems data within a single report.

Key Features

General

- An add-in to Microsoft Word enabling information to be transferred from SunSystems directly into your documents
- Report Designer for flexible reporting
- Multi-dimensional analysis using cube analysis
- Statistical reporting using extract modes
- Secure access

Accessing SunSystems data

- Purpose built functions, represented on the Microsoft Word menu, allow dynamic and flexible access to data from SunSystems to populate Microsoft Word documents
- Both transaction and reference information can be combined in a single, formatted, output document

Enterprise Reporting and Analysis

- Enables information to be extracted from SunSystems to Microsoft Word and combined with key data from other corporate or external data sources

- Easily integrates data into monthly, management, statutory reports and other documents
- Develop templates to easily share standard report and query designs
- Flexible output options include HTML, PDF, e-mail or print
- Combined with Microsoft Word's comprehensive formatting capabilities, Vision Word enables a comprehensive and wide-ranging enterprise reporting and analysis

Multi-Dimensional Analysis

- Perform multi-dimensional analysis on selected extracts of data
- Drill down to transactional details
- Use an 'offline' viewer to distribute cubes of data

Secure Access and Control

- Only authorized users can access sensitive data
- SunSystems security is fully respected
- Restricts access to certain tables

Availability

- All SunSystems 5 releases from 5.1.2 SP1 SQL & Oracle and 5.2.1 SQL
- All SunSystems 4.2.6 SQL & Oracle releases

Please refer to your SunSystems representative for more information on requirements for other operating systems and software environments.
